

RECENT EXPERIENCE

Full-stack Developer, School of Code

- Proficient in both back and front-end development, with experience in building projects using technologies such as Node.js, Express.js, MongoDB, MySQL, PostgreSQL, Couchbase, and React, Next, Tailwind, SASS.
- I have experience in building ERDs and knowledge of UI/UX design principles and tools.
- Experience in agile development methodologies and a human-centered design approach. Adept in utilising agile sprints, scrum poker, and dot voting, while also playing the role of Scrum Master.
- Pair programming, weekly hackathons; Led backend team in the final week project and school's coding club project
- Experience in code reviews and code refactoring. Creating code documentation and explanations via commenting, readMe files and using tools such as notion, miro and trello.
- At the moment, I am learning C# and writing my first programmes using Xamarin. I am interested in learning other languages like Java, Python, Go.
- I am familiar with TDD, unit, system and integrated testing, CI/CD, git strategies, branch protection rules; I worked with jest, supertest and cypress.
- Deployed applications using Render, Netlify and AWS Amplify services

EMPLOYMENT HISTORY

Second Officer, Columbia Ship Management , promoted to a Chief Officer - Nordic Tankers, FrontLine, Sea Tank Chartering, Columbia Shipmanagement, worldwide 2016 - Present

- Proven ability in critical thinking, decision-making and navigating ships under pressure, leading teams and prioritizing tasks based on urgency and importance.
- Utilised agile techniques, including assessment, planning, execution, and monitoring, while compiling voyage/cargo plans. (Concept similar to agile sprints).
- Expertise in operating a variety of navigation and cargo systems. Discussed challenges with developers and industry experts at the Human Centred Design forum at INMARSAT headquarters in London in 2019. My unique perspective allows me to contribute to software development by understanding and addressing the needs of end-users which is often overlooked by developers.
- Experienced in shipborne operations with a focus on testing and operating ship systems through adherence to checklists. This includes but not limited to testing of ODME for numeric value inputting to check algorithms and equipment performance. Another example is the use of ECDIS for immediate feedback alerts similar to ESLint.
- Processing and completion of electronic data interchange forms. Submitting schedule details and analytical data using different reporting software for forwarding to charterers, owners and agents to keep stakeholders informed.

Third Officer- Columbia Shipmanagement, worldwide 2013 - 2016

- Health, Safety and Quality meetings secretariat. Preparing meetings minutes, reports and suggestions for improvement. Management of change. Documentation of new procedures; filing and updating quality management systems documentation.
- Administration of online forms, checklists, documents. Uploading documents into electronic data interchange services.
- Legal record keeping, filling up, submitting and verifying legal forms and contracts. Monitoring compliance with international and national legislation.

PROJECTS

Final Project (Work in Progress) - Full-stack app written in Next and Node using Tailwind and MongoDB. Developed backend for the app, introduced MongoDB to the backend team and provided training. Styled pages and components using Tailwind. Agile planning, problem solving, prioritising tasks based on urgency and importance during scrum meetings. Worked on authorisation and authentication.

Weather Checker - A fully responsive website written in Typescript using React. Auth0 is implemented for authentication, It has multiple page routing and fetches three APIs (geolocation and openweathermap). The app allows the user to check the weather forecast in their current location, location of their choice and a five day forecast with the option to see daily and three hourly slots forecast throughout a five day period.

Booki - Turn Mock-ups Into a Web Page with HTML & CSS. My first ever built static HTML and CSS mockup

MyPortfolio - My portfolio website deployed on AWS. More projects will be added to the portfolio. Written in React. It has implemented React Hooks, Routes, Dark Mode Toggle, Multi Paged, UI/UX design

EDUCATION

Intensive Full Stack Development Bootcamp

School of Code
2022 - present
UK nation-wide

Pursuing membership through Professional Qualifying Examinations

Institute of Chartered Shipbrokers
2022 - present
London, UK

BSc (Hons) in Engineering- Navigation

Kerch State Maritime Technological University

Achievements: Grade: Honours. Student of the Year and Awarded Presidential Scholarship for Achievement in Maritime Studies

2009 - 2013
Kerch, Crimea

Certification:

- Cyber Security Awareness
- Emergency preparedness and response
- Maritime Resource Management
- Audits and Follow-up

LANGUAGES

INTERESTS

- Programming, Development
- Hiking, Gardening
- Photography, videoediting
- Toastmasters Public Speaking
- Shipping industry
